

Combinatorial Optimization

Lecture Notes, Winter Term 11/12
Albert-Ludwigs University Freiburg

Alexander Souza

Contents

1	Introduction	4
1.1	Examples	4
1.2	Combinatorial Optimization Problems	5
1.3	Algorithms and Approximation	6
I	Optimization Algorithms	7
2	Network Flows	8
2.1	Maximum Flows and Minimum Cuts	8
2.2	Edmonds-Karp Algorithm	12
2.3	Minimum Cost Flows	13
2.4	Assignment Problem	15
3	Linear Programming	18
3.1	Introduction	18
3.2	Polyhedra	19
3.3	Duality	22
II	Approximation Algorithms	28
4	Knapsack	29
4.1	Fractional Knapsack and Greedy	30
4.2	Pseudo-Polynomial Time Algorithm	31
4.3	Fully Polynomial-Time Approximation Scheme	33
5	Set Cover	35
5.1	Greedy Algorithm	36
5.2	Primal-Dual Algorithm	39
5.3	LP-Rounding Algorithms	41
6	Satisfiability	45
6.1	Randomized Algorithm	46
6.2	Derandomization	48
7	Makespan Scheduling	50
7.1	Identical Machines	50
7.2	Unrelated Machines	53

8	Bin Packing	56
8.1	Hardness of Approximation	56
8.2	Heuristics	56
8.3	Asymptotic Polynomial Time Approximation Scheme	58
9	Traveling Salesman	60
9.1	Hardness of Approximation	60
9.2	Metric Traveling Salesman	60
